## FCC §1.1307 & §2.1091 -MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Report No.: RSHA191016004-00A

## **Applicable Standard**

According to subpart §2.1091 and subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |       |        |                        |                          |  |
|---|-------|--------|------------------------|--------------------------|--|
| Frequency Range<br>(MHz)                                |       |        | Power Density (mW/cm²) | Averaging Time (minutes) |  |
| 0.3-1.34  | 614   | 1.63   | *(100)                 | 30                       |  |
| 1.34-30   | 824/f | 2.19/f | *(180/f <sup>2</sup> ) | 30                       |  |
| 30-300  | 27.5  | 0.073  | 0.2                    | 30                       |  |
| 300-1500  | /     | /      | f/1500                 | 30                       |  |
| 1500-100,000  | /     | /      | 1.0                    | 30                       |  |

f = frequency in MHz; \* = Plane-wave equivalent power density;

According to §1.1310 and §2.1091 RF exposure is calculated.

## Calculated Formulary:

Predication of MPE limit at a given distance

 $S = PG/4\pi R^2 = power density (in appropriate units, e.g. mW/cm^2);$ 

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

## **Calculated Data:**

Calculation of maximum antenna gain based on EIRP

| Mode             | Max Tune-up Power<br>(dBm) | EIRP Limit<br>(dBm) | Max Antenna Gain |  |
|------------------|----------------------------|---------------------|------------------|--|
| NB-IoT<br>Band 4 | 24.00                      | 30.00               | 6.0 dBi          |  |

Calculation of maximum antenna gain based on MPE

| Mode             | Frequency<br>Range | Tune-up<br>Conducted<br>Power |        | Power<br>Density<br>Limit | Maximum<br>Power<br>Density | Evaluation<br>Distance | Maximum Antenna<br>Gain Allowed based<br>on MPE |           |
|------------------|--------------------|-------------------------------|--------|---------------------------|-----------------------------|------------------------|---|-----------|
|                  | (MHz)              | (dBm)                         | (mW)   | (mW/cm <sup>2</sup> )     | $(mW/cm^2)$                 | (cm)                   | (dBi)   | (numeric) |
| NB-IoT<br>Band 4 | 1710.1-1754.9      | 24.00                         | 251.19 | 1.0000                    | 0.9995                      | 20                     | 13.01   | 20.00     |

Report No.: RSHA191016004-00A

| Mode  | Max Allowed Antenna Gain |
|---|--------------------------|
| NB-IoT (Band 4) Frequency Range: 1710.1-1754.9MHz | 6.0 dBi                  |

**Result: For NB-IoT mode**, to meet RF exposure EIRP, the maximum net gains of antennas allowed is 6.0 dBi @ NB-IoT (Band 4). The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.
